Internship

Software Engineering Intern — ITREE Dynamics Solutions Pvt Ltd

July 2024 – August 2024

- Built and shipped a full-stack personal finance dashboard used internally, featuring real-time Firestore sync, a 7-step expense entry wizard with OCR receipt parsing via FastAPI and EasyOCR, and savings goal tracking.
- Owned the OCR receipt scanning module end-to-end — designed the FastAPI backend, integrated EasyOCR and OpenCV for image preprocessing, and wired it into the React frontend for auto-population of expense fields.
- Collaborated in a team environment through feature planning, iterative code reviews, and sprint-based delivery.

Projects

Expense Manager — Personal Finance Dashboard

[GitHub](#) | [Live Demo](#)

- Built a full-stack fintech dashboard with real-time Firestore sync via `onSnapshot` listeners, supporting live expense tracking, savings goal management, and monthly budget allocation across multiple bank accounts and cards.
- Engineered a 7-step expense wizard with OCR receipt scanning (FastAPI + EasyOCR + OpenCV), auto-populating form fields from scanned receipts and falling back to manual entry — deployed on Vercel.
- Implemented Firebase Auth with Google OAuth, protected routes with onboarding state machine logic, and Recharts visualizations including pie charts for category breakdown and bar charts for weekly spending trends.

Music Recommendation System (Content-Based)

[GitHub](#)

- Implemented content-based recommendations using vectorized Spotify audio features and cosine similarity for top-N retrieval across a dataset of 10,000+ tracks with sub-second inference latency.
- Built an offline preprocessing pipeline with feature scaling and serialized scikit-learn artifacts to decouple training from runtime — mirrors production ML serving patterns.
- Engineered robust track resolution using the Last.fm API with normalization for covers, remixes, and ambiguous titles, and applied era and popularity filters to reduce dataset bias in recommendations.

Education

B.Tech in Information Technology

2023 – 2027

Manipal Institute of Technology, Bangalore

Relevant Coursework: Data Structures, DBMS, Operating Systems, Computer Networks

Skills

Frontend: React.js, Tailwind CSS, Framer Motion

Backend: Firebase, FastAPI, Firestore, Axios

Programming Languages: Python, JavaScript (ES6+), C#

Databases: Firestore, MySQL, Oracle

ML / Data: scikit-learn, pandas, NumPy, cosine similarity, content-based filtering

Tools: Git, GitHub, Vercel, VS Code, EasyOCR, OpenCV

Certifications

Introduction to Recommender Systems (Non-Personalized and Content-Based) — University of Minnesota (Coursera)
